

Subexp01: absolute differences relative to 50°/50° baseline

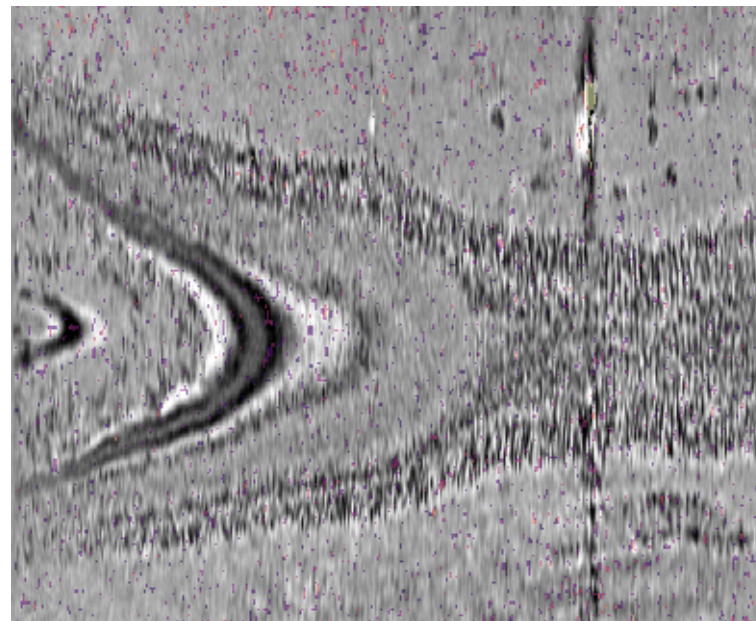

|refined 30° - refined 50°| overlay | XY

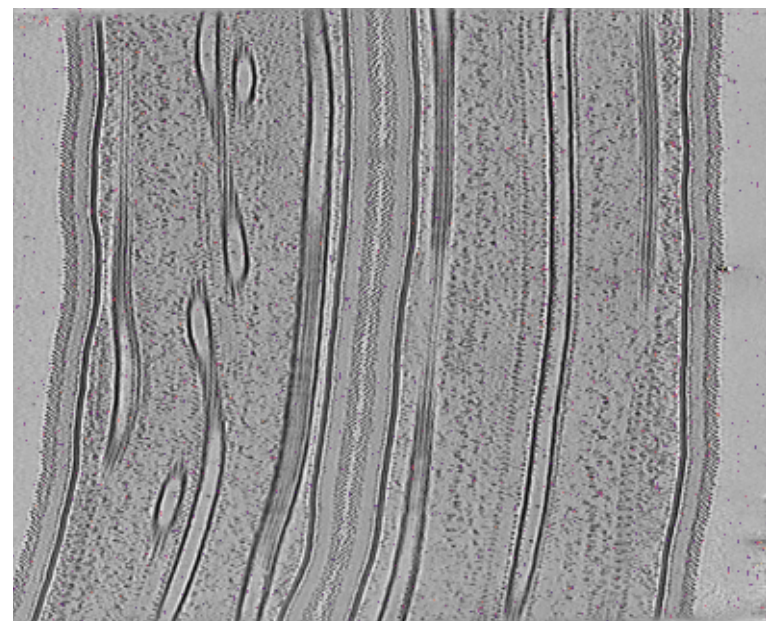

|refined 30° - refined 50°| overlay | XZ

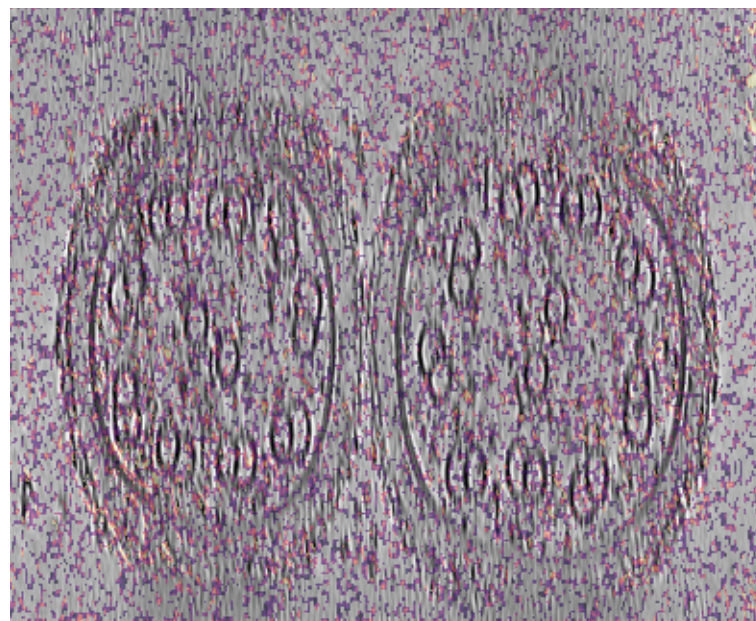

|refined 30° - refined 50°| overlay | YZ

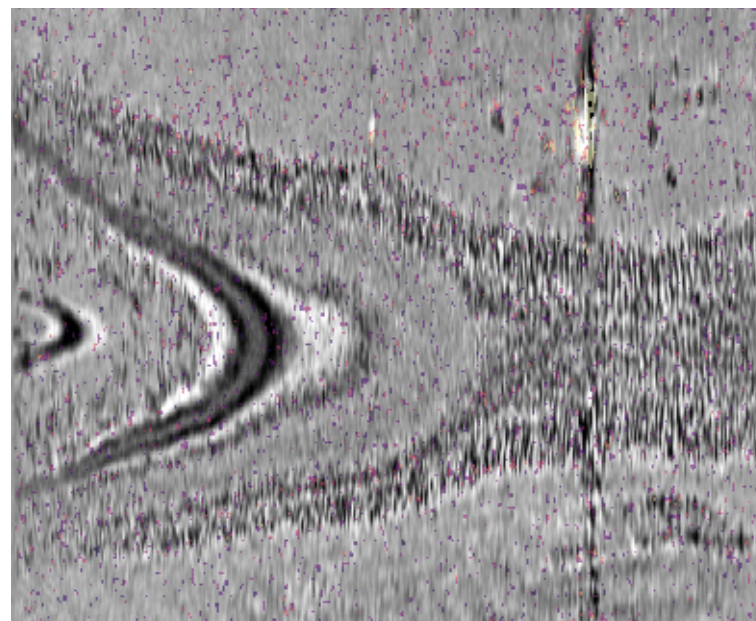

|refined 70° - refined 50°| overlay | XY

|refined 70° - refined 50°| overlay | XZ

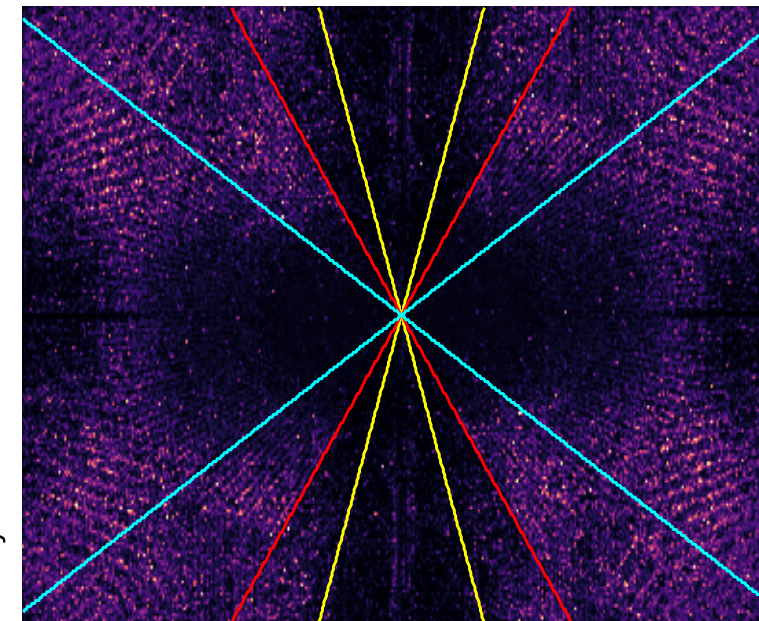

|refined 70° - refined 50°| overlay | YZ

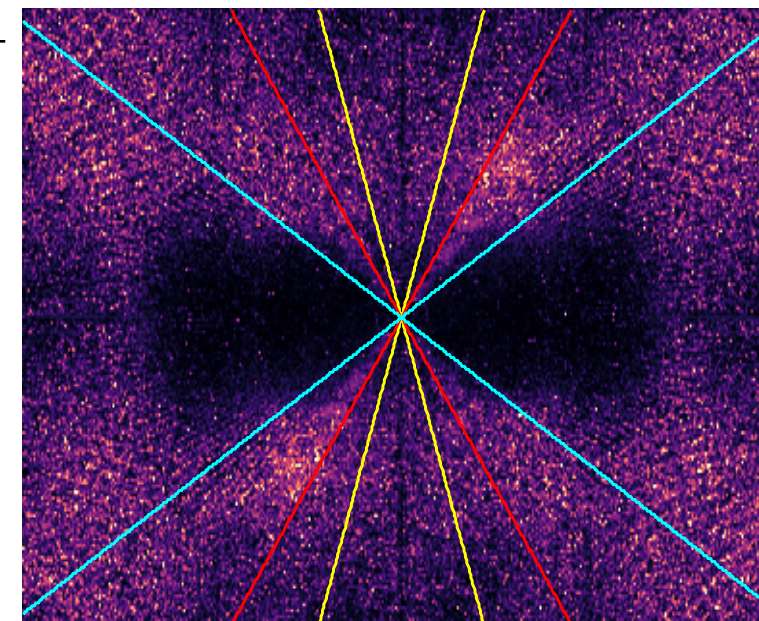

— 30° wedge boundary
 — 50° wedge boundary
 — 70° wedge boundary

|log power 30° - log power 50°| | XZ

|log power 70° - log power 50°| | XZ

absolute real-space density difference

absolute log-power difference

Baseline image: refined 50°/50° tomogram. Real-space overlay shows $|\text{difference}| \geq 10\%$ of the 99th percentile. Fourier panel shows absolute XZ log-power difference.
